

NEXT GENERATION BACK-UP PLATE

PART NUMBERS:

BP2-324

BP2-324-0

(Replaces BP-324)

Innovative Design

- Tighter tolerances -smoother fit
- Engineered recessed prepunched holes help guide fasteners into proper placement
- Four (4) dimple imprinted staggered tabs provide:
 - * Easier and quicker installation
 - * Positive friction installation assistance
 - * No required clamps to hold in place while upslope panel is installed
- Increased material strength at pre-punched hole locations due to tubulation for better ply clamping while increasing torque required to strip out fasteners- less strip outs
- Wider substrate panel support at endlaps/highside/ridge
- Ease of cinch strap placement – when required
- Precision stamped parts adhere to stricter design performance tolerances
- Galvanized G-90 material for longevity/durability
- Parts design flexibility- available with or without flanges -for placement onto deck or rigid insulation
- Extended shoulders allow optional SDS fasteners for ultralong panel runs, or extreme wind uplift areas as required
- Part Flanges act as stiffener against bending for gravity loads and uplift
