

# TS BACK-UP PLATE

## PART NUMBERS:

BP2-324

BP2-324-0

## INNOVATIVE DESIGN

- Precision stamped parts adhere to stricter design performance tolerances
- Engineered recessed prepunched holes help guide fasteners into proper placement - ease of cinch strap placement
- Four (4) dimple imprinted staggered tabs provide:
  - Easier and quicker installation
  - Positive friction installation assistance
  - No required clamps to hold in place while upslope panel is installed
- Increased material strength at pre-punched hole locations due to tubulation for better ply clamping while increasing torque required to strip out fasteners- less strip outs
- Wider substrate panel support at endlaps prevent panel rotation
- Galvanized G-90 material for longevity/durability
- Versatile design option - either inline or staggered end laps
- Parts design flexibility- available with or without flanges -for placement onto deck or rigid insulation
- Extended shoulders allow optional SDS fasteners for ultralong panel runs, or extreme wind uplift areas as required - improved performance
- Part Flanges act as stiffener against bending for gravity loads and uplift
